```
New transposable element comprising at least a portion of a nucleic acid comprising two terminal inverted repeat nucleic acid sequences, useful in designing oligonucleotide primers.
```

Claim 6; SEQ ID NO 17; 202pp; English.

and the encoded proteins thereof. Specifically, it refers to the polynucleotides of the mping/Pong family of transposable elements that each comprise two terminal inverted repeat nucleic acid sequences, where the transposable element is actively transposance, these polynucleotides encode proteins that can function as transposaces or proteins that interact with transposaces to meduate transposation of members of the mping/Pong genus. The present invention describes transposation of members of the mping/Pong genus. The present invention describes transposable element is useful for designing oligonucleotide primers that can be used, in turn, for the isolation of related members of the mping/Pong family of transposable elements, and for detecting transpositions of the transposable element. This polynucleotide is the DNA sequence of a member of the rice mping/Pong family, in an This invention relates to novel isolated transposable elements from rice

Sequence 17, Application US/09244796

Patent No. 6281344

GENERAL INFORMATION:

APPLICANT: Scottak, Jack W.

APPLICANT: Liu, Rihe

TITLE OF INVENTION: SELECTION OF PROTEINS USING RNA-PROTEIN

TITLE OF INVENTION: EUS.003

FILE REFERENCE: 00786/350007

CURRENT PAPLICATION NUMBER: US/09/244,796

CURRENT APPLICATION NUMBER: 60/035,963

EARLIER APPLICATION NUMBER: 60/044,91

EARLIER FILING DATE: 1997-01-27

EARLIER FILING DATE: 1997-01-27

EARLIER FILING DATE: 1997-01-27

EARLIER FILING DATE: 1997-01-27

EARLIER FILING DATE: 1998-01-14

Sequence 22, Application US/09806708B

Patent No. 6784342

GENERAL INFORMATION:
PAPLICANT: The University of British Columbia

TITLE OF INVENTION: Regulation of Embryonic Transcription in Plants
FILE REFERENCE: 4810-58741

CURRENT APPLICATION NUMBER: US/09/806,708B

CURRENT APPLICATION NUMBER: US 60/147,133

PRIOR PILING DATE: 1999-08-04

NUMBER OF SEQ ID NOS: 23

SOFTWARE: PatentIn version 3.0

SEQ ID NO 22

LENGTH: 1141

/Soth and leaf (50%) tissues from wheat cultivar Norstear after short exposure times to low temperature in the light and in the dark. 12 mRNA populations were combined before constructing the library. The first 6 populations: After 7 days of growth at 20Cs from wheat cultivar Norstear after short exposure times to low temperature in the light and in the dark. 12 mRNA populations were combined before constructing the library. The first 6 populations: After 7 days of growth at 20, wheat plants were transferred to 4C in the light. 1cm crown sections and green leaf tissu were separately harvested after 1, 3, and 6 hours of low temperature exposure. The last 6 populations: After 7 days of growth at 20C, wheat plants were transferred to 4C in the dark. 1cm crown sections and green leaf tissu were separately harvested after 1, 3, and 6 hours of low temperature exposure. First strand synthesis in this library was done in the presence of methylated ACTP thereby protecting from internal cleavage with NotI. In addition, this library used a primer for second strand synthesis that annealed to an artificial sequence (RNA) allow and an entable of the presence of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             oligo) added before first strand synthesis. Therefore when

This sequence is the direct result of the Base calling software
Phred (default parameters). It is the raw base calls. To aid in the
identification of the high quality insert the software Lucy
(default parameters) has been run on this sequence. Lucy identified
the region [125,709].
